

An Index of ISDA Terms

ISDA®

INTERNATIONAL SWAPS AND DERIVATIVES ASSOCIATION, INC.

“An Index of ISDA Terms” was conceived, designed and created by Harry Jho.

Mr. Jho would like to acknowledge the contributions of the many friends and colleagues who helped to produce this resource for the derivatives industry – in particular, the contributions of Steven Lofchie, who has been a friend on this and many other projects.

Mr. Jho graduated in 1999 with a J.D. from Yale Law School and holds degrees from the University of Michigan in Classics and in Archaeology. Mr. Jho is a specialist in Equity Derivatives and Prime Brokerage and has appeared on occasion as a speaker for ISDA at seminars on Equity Derivatives.

NOTES REGARDING THIS INDEX

When I first encountered ISDA documentation in 2001, I was struck by the power of ISDA's modular system to document complex financial transactions in volume, with relative ease. I was also struck by how difficult it was to coordinate among each of the various definition booklets and agreements that combine to form the documentation complex supporting a derivatives confirm. In addition to learning the substance behind the language provided in the various printed agreements and documentation booklets, there was, at the threshold, the logistical challenge of finding where a particular term was located. Do I look for "Exposure" in the 2000 ISDA Definitions? Why can't I find "Floating Amount" in the 1996 Equity Definitions? Every once in a while, I would come across a term I had never seen before, like "Substitute Calculation Agent," only to find after much effort that it was not defined in any ISDA publication, but elsewhere in the confirmation package. Like every other new practitioner in this space, I engaged in a great deal of trial-and-error before I could pinpoint the location of (nearly) every ISDA term I came across.

For me, learning how to make my way through the ISDA system was very much like learning a new language. When reading Latin and Greek in college, I relied heavily on dictionaries and grammars to help me get through dense language. In those early days, I thought how wonderful it would be if only there was a resource that I could rely on for support, like the grammars that I used to help me study the classics. Ideally, I could have something that collected all the ISDA terms in one place. One place to see where each defined term was located or, just as importantly, to confirm that a term was not defined by ISDA at all. It is with this need in mind, that I produced this Index. I began the process in 2001, focusing initially on equity derivatives publications and, over the years, expanded the scope of the Index to include all of the other asset classes. I included all of the definition booklets, including any annexes and key supplements. I included the Master Agreement and the Credit Support Annex, but decided to exclude confirmation templates. Unfortunately, including the confirmation templates resulted in excessive duplication of terms such as "Effective Date." I briefly considered whether to make an editorial decision to include certain key terms on a case-by-case basis but ultimately determined that I did not have the time necessary to undertake such an effort. With respect to each definition booklet, I began by first incorporating all of the terms included in its index. However, I found that certain common terms, such as "Option Style" in the 2002 ISDA Equity Derivatives Definitions were not located in the index, but in the table of contents. I, therefore, then decided to also add the table of contents for each booklet into the Index. Later, I found that certain key terms, such as "Variable Obligation" in the 2002 ISDA Equity Derivatives Definitions were not found in either of the table of contents or the index, so initiated a project to search out those terms and include them as well. As part of that effort, I also sought to have as many of the terms in the Index citechecked as possible. Although, I cannot say conclusively that every item was examined, I believe the industry will be happy with the level of diligence employed.

I, of course, did not do all of this work myself. Over the years, many people spent a great deal of time contributing long hours poring over pages of text, conducting computer searches, and proofing the dense spreadsheets the Index was compiled on. It was their time and effort that ultimately allowed the Index to take shape. I am humbly grateful that so many people were willing to commit their time to help me transform my idea into a resource for the industry.

My hope is that this resource can help ease the burden for all ISDA practitioners. For those beginning to get their arms around the ISDA system, perhaps this will allow them to spend more time on learning terms than looking for them. For those who are juggling multiple asset classes, as many do on the buy-side, I hope that this will ease somewhat the burden of keeping track of the many different moving parts we often have to keep track of in our industry. Finally, for the seasoned product specialist, those unique individuals who can recite the section references for every key term, I hope that the Index will at least give you comfort that those terms that you thought were not defined by ISDA, are not – or at least are not included in this Index. I look forward to one day having the chance to negotiate a confirmation with each and every one of you.
