Liquidity Risk Management

流動資金風險管理

The Branch's liquidity risk appetite is that it will, at all times, maintain liquidity to meet all financial needs, including new business opportunities, on a commercially viable basis in "normal course of business" conditions. The Branch will additionally maintain a prudent degree of protection to mitigate the effects of extreme, but plausible adverse events on its daily operations and its financial condition

The Liquidity Management Framework ("LMF") is the primary internal policy document that provides direction to the Branch's businesses and functions on the management of liquidity and sets clear governance process. It is updated by the Group's Corporate Treasury and approved by the Asset and Liability Committee ("ALCO"). The Branch also has a suite of liquidity policies including a local Liquidity Management Framework, Liquidity Contingency Plan and Liquidity Stress Testing Policy.

The LMF identifies 6 key pillars of liquidity management: funding access, funding requirements, liquidity assets, liquidity contingency planning, liquidity transfer pricing and management information. In parallel, 3 types of liquidity risks are identified, along which risk identification, measurement and mitigating strategies are deployed: structural, tactical and contingency.

The Risk Committee and ALCO share management oversight responsibility for liquidity management. Corporate Treasury is responsible for maintaining and implementing the LMF. The Branch's liquidity is managed by the Treasury Market Services ("TMS") business. Independent oversight is provided by the Market Risk Team.

On daily basis, Finance calculates the liquidity maintance ratio, in accordance with the Banking Ordinance, and reports to TMS business. Market Risk produces a report for the TMS business detailing our liquidity positions. Cash-flow limits are monitored daily against established limits, Liquidity Stress Testing is performed daily by the Market Risk Team.
